INDEPENDENT DIAMOND CERTIFICATION

DIRECT CUSTOMER

Gemstone and Pearl Testing

AnchorCert Gemstone Testing Services Available

- Identification of any cut gemstone
- Identification of treatments e.g. heat treatments, glassy residues, fissure filling, cobalt coating
- Determination of country of origin on certain gemstones

AnchorCert offers expert services covering every type of coloured gem. The detail provided on a Gemstone Report depends on the customer requirements and the stone.

Basic identification, which will simply identify the stone, is available on all cut stones and can sometimes be carried out on mounted stones.

Testing and identifying treatments is a service in high demand and AnchorCert is fully equipped to identify the latest treatments. Treatment testing is available on all loose gems.

AnchorCert can often identify where the gemstone is from. This is known as the country of origin and is only possible for some gemstones, usually emeralds, sapphires and rubies. Stones will be required loose for this service.

Results for all the above services are provided by either written AnchorCert reports, which can include an image or verbal consultations.

The turnaround for testing can take 2 – 3 weeks.

Pearl Testing

AnchorCert Independent Certification offers pearl identification reports.

- The laboratory identifies:
- Natural Pearls
- Beaded, cultured pearls
- Non-beaded cultured pearls
- Imitations

Strings of pearls and loose single pearls can be examined and, depending on client requirement, results can be provided as written AnchorCert Reports or verbal consultations.
