## Diamond and Gemstone Laser Inscription

### SECRET GEMSTONE INSCRIPTIONS – YOUR PERSONAL MESSAGE

The unique AnchorCert Gemstone Inscription Service uses a highly sophisticated laser process to inscribe delicate marks on to the girdle or table of a gemstone without damaging the stone.

Inscriptions can be applied to both loose and mounted stones as long as the area to be inscribed is easily accessible – e.g. between the claws of a ring setting. Readable using 10X magnification but virtually invisible to the naked eye.

To improve the security of a stone we can inscribe a small, discreet and unique security number on to the girdle of a stone.

If the diamond or gemstone has been certificated by AnchorCert, the unique number that has been allocated to it is ideal for this purpose. You may, however, use your own unique number if preferred.

AnchorCert's inscription service can also be tailored to meet the needs of the retailer or consumer. There are a variety of fonts and shapes readily available to add that personal touch to the inscription.

If you would like to enquire about inscriptions please send the details along with any artwork examples to [gem@theassayoffice.co.uk](mailto:gem@theassayoffice.co.uk) to obtain a quote. Set up fees may apply.
