Laser Diamond Inscription

SECRET DIAMOND INSCRIPTIONS - YOUR PERSONAL MESSAGE...

The unique AnchorCert Diamond Laser Inscription Service uses a highly sophisticated laser process to inscribe delicate marks on to the girdle of the diamond without damaging the stone.

Inscriptions can be applied to both loose stones and to diamonds that are already set into jewellery as long as the area to be inscribed is easily accessible - e.g. between the claws of a ring setting.

To improve the security of your diamond we can inscribe a small, discreet and unique security number on to the girdle of your stone. If your diamond has been certificated by AnchorCert, the unique number that has been allocated to it is ideal for this purpose. You may, however use your own unique number if preferred.

To personalise diamonds to your company you could choose to have the company logo or name inscribed on the diamond. In previous years, AnchorCert have inscribed logos on the table as well as the girdle of a stone.

If you would like to enquire about inscriptions please send the details along with any artwork examples to gem@theassayoffice.co.uk to obtain a quote. Set up fees will apply.
